Dear Zoning Board,

On January 7, at approximately 2:45pm, another parent and I witnessed a car waiting in the Boyden pickup line on Washington St being struck on the side by a car trying to speed past the line. The car sped past the line into oncoming traffic from the other lane and stopped abruptly when they realized there was a crosswalk with students about to cross. The car's side view mirror was struck loud enough for anyone around to hear.

The size of the Omni project with double the added cars is only going to increase the damage that could potentially be done. I'm not sure if anything can be done to make that intersection safer. If the intersection is going to be changed, at the bare minimum, residents need to be involved in that conversation with a traffic expert meeting us down this way so we can show them exactly what occurs on a daily basis.

Thank you,

Erica Burdon
